**P**LANT Peonies, the most gorgeous flowers on earth; plant in masses, and have a splendid carpet of loveliness fit for the touch of angels' feet. Don't be stingy with the front yard. A fine house in a neglected yard is like a thousand dollar picture in a ten cent frame. Plant in abundance and do not depend on two or three flowers to glorify a whole lawn. Beauty is wealth; raise a crop of it and be rich. Let us get a combination and fix up the home so it will be a blessed memory in after years. The home is not a kennel, a stable, a sty, or a barn. It is a dwelling place for immortals, who stand on the borders of the eternal beauty, where the stars are planted in the vast flower gardens of the Father.

**T**N addition to our own productions we have included in the list the best novelties and most popular moderate priced varieties now on the market. In nearly every instance we show the name of the originator in parenthesis following the name of the variety.

We are pleased to offer you the result of years of effort to produce more beautiful flowers. They were produced as a result of our own love for beauty and because we hope to give pleasure to those who also love beauty.

Surround your home with beautiful flowers and there, at the close of day, you will find in your garden rest and refreshment for your soul; in the mornings a renewed inspiration. To your children you will bequeath a more wholesome attitude toward life and an ability to enjoy it. You will attract friends for yourself and help to develop your community.

Sincerely yours,

A. J. WILKUS.

The above medals are some of the prizes and awards to the Riverview Gardens at Peony and Iris shows for the excellent quality of blooms. They in a measure testify to the quality of our stock.

**OUR GUARANTEE.** We guarantee our stock to be true to name. Should a customer receive from us a root that eventually proves not true, we will promptly replace the root with one that is true. The customer may retain the root sent in the first place.

**SIZE OF ROOT.** We send out one size of roots, a LARGE DIVISION as indicated in the catalogue. Our LARGE DIVISIONS (L. D.) carry at least three buds or eyes and a good generous root system.

**PRICES AND DISCOUNTS.** If cash reaches us before shipment, and not otherwise, \$11.00 worth of plants may be chosen for \$10.00; \$27.50 worth for \$25.00; \$57.50 worth for \$50.00; and \$120.00 worth for \$100.00.

**HOW TO REMIT.** Make remittances by either post office order, registered letter, check, or bank draft payable to the RIVERVIEW GARDENS.

**METHODS OF SHIPMENT.** Orders of from one to six plants can generally be shipped cheaper by parcel post than by express. Orders of six to 100 roots generally sent by express.

We do not pay transportation charges either by parcel post or by express. It has been our custom up to this time, when we thought we could save our customer a little, to forward by parcel post, and prepay the postage; expecting that the customer would remit the postage to us. But we find that we have lost considerable money by this, as many have failed to reimburse us for our outlay, but we still wish to save our customers on transportation charges. To do this we have decided that on small orders, if the customer will remit ten cents per root, we will forward roots by prepaid parcel post. In doing this, we expect that our losses and gains on postage will be about equal.

Very large orders, when prompt delivery is important, and made up of very valuable varieties, should be sent by express. Nevertheless we should like to have our customers give us instructions as to the shipping. In the absence of this we will use our best judgment.

## RATING OF VARIETIES.

We have thought it best to list the ratings as given by the American Peony Society only in the case of varieties which received a vote of twenty or more members. We realize that the symposium has done a great deal of good and we also believe it has done some harm. The figures "8.5" in the description of the peony Adolphe Rousseau, for instance, mean that this peony received the vote of twenty or more members of the American Peony Society and was awarded a rating of 8.5 out of a possible 10 which would mean perfect.

## PEONY ARRANGEMENT, PLANTING AND CARE.

Peonies may be planted in almost every conceivable place, as single specimens, in large or small beds, against shrubbery, or along the walks on the lawn, or in long rows bordering walks, drives, and on division lines, or producing broad landscape effects in the open field. Mass planting, however, always produces the grandest effects, especially when placed before backgrounds of trees and shrubs.

They thrive in any good garden soil, unless too sandy, and in almost any situation except directly under large trees. They should not, however, be planted in soil where peonies have recently been grown before.

The very best time to plant Peonies is from September 10th, when the roots are ripe for digging, until the ground is frozen. The earlier they are planted, the better will they become established—they start growing at once. Can also be set in early Spring, providing it is done very early; as soon as the ground is in good condition to work.

DISTANCE TO PLANT will vary according to the variety. Tall varieties naturally require more room. A very good rule to follow is to set them the distance of their own height. If a variety is thirty to thirty-five inches high set them thirty inches apart each way and they will have ample room, but if wanted in one continuous row, then six inches less in every case will do; that is, twenty-four inches apart in the row will give them enough room, as they can spread out on the sides.

Holes large enough to receive the roots should be dug about fifteen to eighteen inches deep, and as much across. If very dry, fill this with water before planting, and let it all soak in. Then place the root in the center, just deep enough so the eyes are two or three inches below the surface; fill in with good, fine soil to the eyes of the root and press or place the earth firmly around the root; water some more and let it soak in, then fill the hole level full with loose earth without packing it, and the job is done. Keep the top always loose and free from weeds and grass. Too deep planting should be carefully avoided, as this is often the cause of shy blooming.

FRESH MANURE should not be used or come in contact with the roots, but rotten manure can be used carefully as a top dressing every fall. Do not place it on the top of the plant. A little Bone-meal may be applied in the fall and pulverized sheep manure worked into the soil around the plants in the spring.

The ground around your plants should always be kept loose by frequent hoeing and cultivation. Peonies should have at least the same care in this respect as a crop of corn or potatoes. Your reward will be flowers of large size and more brilliant in color.

Exhibition flowers can be had by DISBUDDING; that is, pinching off all sidebuds when the size of peas, leaving only the center one on each stalk to develop and bloom.

# IRIS

## CULTIVATION, AND PLANTING SUGGESTIONS

There are iris for both wet and dry situations. The most satisfactory flowering varieties require a well drained, sunny location. The bulb or rhizome should be planted just below the surface of the ground. The roots, with which good plants are well supplied, should be spread out and the soil packed firmly about them. Any good garden soil will be found suitable for iris. Bone meal or finely ground limestone are very good fertilizing elements. Manure should be sparingly used as it is apt to produce root rot. This is one of the worst diseases the iris grower has to contend with and is more prevalent during a warm, wet season. Lime phosphate or superphosphate of lime will be found of great benefit in checking this trouble. Finely ground plaster placed in the trench in which iris is planted will be found beneficial. Where iris is found to be badly infected, it is best to dig up the plants, remove all diseased portions, dip in a light solution of formaldehyde or permanganate of potash and replant in a new location. For borders and in any perennial planting, the iris is indispensable. Most pleasing color combinations may be secured. In delicacy of texture and profusion of color, the iris rivals the peony.

Iris may be planted successfully at any time when the ground is not frozen. Perhaps the very best time is shortly after the blooming season or during July or August. This gives the plant sufficient time to obtain a good root growth before freezing weather retards growth.

The plants we send out are first class in every respect, and with ordinary care will repay the owner many times for the investment.

OUR SHIPPING SEASON WILL COMMENCE ABOUT JULY 15TH and we urge early orders, for at the very liberal prices quoted it is evident that surplus stocks of some of our varieties will be quickly disposed of.

Unless instructed to do so we will not make substitutions. If substitution is granted we will endeavor to furnish a variety fully equal or better than the one ordered. Please bear in mind that iris can be planted during the early fall months with very gratifying results.

In the following descriptions "S" signifies standards or upright petals, and "F" indicates falls or drooping petals.

The rating marks are those given by the American Iris Society, and represent the impartial judgment of iris lovers all over the country.

We have received many prizes and awards at Peony and Iris Shows and they in a measure testify to the quality of our stock.

In the Northwestern Peony and Iris Shows, we always have carried off many major prizes and awards.

At the American Peony Show, June 1923, we received five Firsts, two Seconds and one Third. We consider this a very good showing for our Peonies.

**"IT IS QUALITY THAT COUNTS."**

**Lest You Forget**
